Canadian Hosting Migration Planning Guide

Compare Canadian website hosting, servers, domains and storage for the services your business uses.

What to check

Service location

Check where the website, application data and backup copies are stored. Review third-party services separately when location matters.

Account control

Confirm domain ownership, administrator access and billing contacts. Keep recovery details current.

Choose services

List the website, email and custom applications you need. Compare total ongoing costs and included support before ordering.

Plan the move

Inventory the existing setup, test the destination and arrange the final data copy. Keep the old service available until the move is checked.

Services to compare

Check the linked product pages for current prices, included resources, availability and terms.

Hosting

Website and email hosting with Virtualmin included. Compare current plans and resource limits.

VPS

Self-managed virtual servers with administrator access. Check current resources, licence costs and backup requirements.

Dedicated

A physical server quoted to your application, storage and networking requirements.

Domains

Register, transfer and renew domains, and manage the DNS records used by your website and email.

Plan the next steps

1. Consolidate core hosting services
2. Choose products by actual workload
3. Keep migration and recovery requirements explicit
4. Scale from web hosting to VPS or dedicated when necessary

Your project notes

Keep this page with your project. Do not write passwords, private keys or other secrets here.

Project / website	
Software and data	
Service / full ongoing cost	
Account owner / administrator	
Backup location / restore test	
Move or launch date / rollback plan
