Freelancer Client Hosting Starter Kit

Organize client domains and websites without taking on server administration unless the project needs it.

What to check

Who owns each service

Record whether the client or your business owns the domain and hosting. Keep account recovery accessible to the agreed owner.

Scope and recurring costs

Separate website work from hosting, licences and maintenance. Put renewal prices and responsibilities in the handover.

Choose the right plan

Use shared hosting for conventional websites. Review a VPS for applications that require custom services or server access.

Project completion

Test forms and email, deliver the service inventory and explain support arrangements. Include backup and restore details.

Services to compare

Check the linked product pages for current prices, included resources, availability and terms.

Hosting

Website and email hosting with Virtualmin included. Compare current plans and resource limits.

Domains

Register, transfer and renew domains, and manage the DNS records used by your website and email.

Migrations

Help planning the site, database and email transfer. Agree on the scope and cutover details before the move.

Backups

SFTP storage for your backup software. Confirm physical separation when the source is also at DotMoose.

Plan the next steps

1. Use repeatable hosting choices
2. Document domain and account ownership
3. Keep a migration and backup checklist
4. Upgrade only the clients that need more resources

Your project notes

Keep this page with your project. Do not write passwords, private keys or other secrets here.

Project / website	
Software and data	
Service / full ongoing cost	
Account owner / administrator	
Backup location / restore test	
Move or launch date / rollback plan
